Answer the questions in the spaces provided on the page. If you run out of room for an answer, continue on the back of the page.

- DO NOT OPEN THE EXAM UNTIL TOLD TO DO SO
- You only need to answer the first question and 4 of the 5 remaining questions.
- On one of the questions, make a large slash across the page, which indicates that it should not be graded.
- On every page (including the first and last page), write your first and last name, before answering the question. Unnamed pages may be lost.
- If you start to answer a question and then change your mind, please cross out the attempt and write **DO NOT GRADE** across it.
- Legibility matters! If we can't read your answer, you will receive a 0 for it.

![Diagram: How to Write Good Code](https://xkcd.com/844/)
Question 1: Scanf Format String................................. 2 points
I need a program that can read in some input and store the information into some variables. My input is formatted as follows:

Name: Josh
Class: 220
Grade: 2.0

I know that no one in the class has a name that is more than 100 characters. Be sure that you don’t allow names longer than 100 characters crash your program.

Here is my code:

```
#include <stdio.h>
#define NAME_MAX_SIZE 100
int main(void) {
    int class;
    float grade;
    char name[NAME_MAX_SIZE + 1];
    // YOUR LINE HERE
    scanf(format_string, name, &class, &grade);
    return 0;
}
```

What should //YOUR LINE HERE be replaced with?

```
char *format_string = ________________________________
```

Points earned: _________ out of a possible 2 points
Question 2: Literals ......................................................... 4 points

(a) (1 point) Which of the following are character literals?
   - 4
   - 'a'
   - '\n'
   - 'ab'
   - '. '
   - '4'
   - 5
   - "4"

(b) (1 point) Which of the following are integer literals?
   - 4
   - 0478
   - 0xF3
   - '4.5'
   - 0
   - 7.0

(c) (1 point) Which of the following are floating point literals?
   - 4.5
   - '4.7'
   - 38.7
   - 87.0
   - 36E4
   - 77.0f
   - 11.
   - 14.8l
   - four

(d) (1 point) Which of the following are string literals?
   - 4.5
   - '4.7'
   - 38.7
   - 87.0
   - 36E4
   - 77.0f
   - 11.
   - 14.8l
   - four

Points earned: __________ out of a possible 4 points
Question 3: Lengths of Arrays ........................................ 4 points
What are the lengths of the arrays for the following array declarations/initializations? If a statement is illegal would be raised, write "illegal".

(a) (1 point) int x[4] = {0, 1, 2, 3, 4} ____________

(b) (1 point) char x[] = "ab\n"11" ____________

(c) (1 point) char x[3] = "abcde" ____________

(d) (1 point) float x[5] = {1.3, 4.7, 0.9} ____________

Points earned: ___________ out of a possible 4 points
Question 4: No Indexing. .................................................. 4 points
You need to write a function that returns the number of 'a' characters that appear in a string. Here is its function declaration:

```c
int count_a(char *str);
```
You need to write the function (named "count_a"), but you are not allowed to use the characters [ or ].

Points earned: __________ out of a possible 4 points
Question 5: Recursion ......................................................... 4 points

Below is a program uses a recursive function. For each of the supplied inputs, write what the program would output. If the program would perform an illegal action, write "illegal".

```c
#include <stdio.h>
int xyz(char *str);

int main(void) {
    char input[10];
    scanf("%s", input);
    int def = xyz(input);
    printf("%d", def);
    return 0;
}

int xyz(char *str) {
    if (*str == '\0') {
        return 0;
    }
    if (*str >= 'a' && *str <= 'z') {
        ++str;
        return 1 + xyz(str);
    }
    ++str;
    return xyz(str);
}
```

(a) (1 point) josh 

(b) (1 point) RaceTrack 

(c) (1 point) Joshua_Richard_Nahum 

(d) (1 point) My Favorite Class 

Points earned: __________ out of a possible 4 points
Question 6: String Alteration .......................................................... 4 points

I like to make my strings exciting. How do I make a string exciting? I add exclamation points (!) to the end of the string. Sometimes I add a lot of them!!!

I need you to write a function that adds a specified number of exclamation points to the end of a string. You can assume the char array is large enough to hold the additional characters added.

The function takes two arguments, a pointer to a string and an int specifying how many exclamation points to add.

I’ll write the first and last lines for you:

```c
void make_exciting(char * str, int n) {
    // YOUR CODE GOES HERE
}
```

You need to write the rest of the body of the function.

Points earned: __________ out of a possible 4 points
If you have finished early, feel free to bring your exam to an instructor.
Or, you can draw a picture of your favorite Pokémon.
Or, you can write a haiku about your love of multidimensional arrays.
