This assignment focuses on software process models.

After reading Chapter 2 of the textbook, answer the following questions (from the book, included here for your convenience):

1. (2.4) A common problem during communication occurs when you encounter two stakeholders who have conflicting ideas about what the software should be. That is, they have mutually conflicting requirements. Develop a process pattern that addresses this problem and suggest an effective approach to it.

2. (2.5) Provide three examples of software projects that would be amenable to the waterfall model. Be specific.

3. (2.8) Is it possible to combine process models? If so, then provide an example. [BHC: explain the rationale for how you selected the process models to combine.]
