

Data Dictionary

Create an entry such as the following for each of the classes in your class diagram.

Element Name		Description
ClassName1 (give in alphabetical order)		Brief description (e.g., purpose and scope).
Attributes		
	AttributeName1:attribtype1	Description1
	AttributeName2:attribtype2	Description2
Operations		
	OperationName1 (arglist): returnType1	Description3
	OperationName2 (arglist): returnType1	Description4
Relationships	Describe relationships between current class and other classes in class diagram.	
UML Extensions	Include whether any of the UML extensions are used (e.g., stereotype (e.g., for software product lines), tags, constraint).
