CSE 470 Group 7 Meeting Minutes
Thursday, 02-18-2002

- Meeting began at 6:30 pm.
- Request was made to please cc: the entire group when sending questions to the professor, etc. so that everyone knows it went out.
- Discussed questions regarding the requirements. Will need to reject bids that don’t beat best bid. Also, minimum and reserve bid are potentially different concepts. Should ask McUmber for clarification.
- Discussed creating scenarios for the readme to go along with the prototype, due Friday. Cheryl is going to do this, then e-mail to group on Wednesday, and then they’ll walk through them and give her feedback and we’ll revise them to final draft via e-mail.
- Did a quick cvs tutorial for anyone with questions
- Talked about the RA doc. Kristina is going to start writing the introduction and assembling little pieces based on the template on the class website. Note: we’re going to want to include something about “future enhancements” in the requirements doc, probably.
- Ed pointed out that we need to keep the data dictionary up to date as we progress on the project, so he was nominated to do that. Also related to this, Cheryl made a directory (web/Docs) for miscellaneous documents like the data dictionary.
- Next thing discussed was the class diagram. We have two potentially good avenues to go down with the basic structure and we’re not sure which one is better, so we’re going to ask Dr. McUmber before class tomorrow.
- Meeting came to an end at 7:30 pm.
