Presentation Guidelines
Guidelines for Presentations

• Brief Presentation of System
  – Time limit: 25 minutes, followed by 5 mins for Q&A
  – Given during last week of class

• Explain what is novel:
  – Each system is different
  – Most important decisions
  – Decisions considered and abandoned (why?)
Guidelines (cont’d)

• Features of System
• Sources of Uncertainty; how mitigated
• Security concerns and how handled
• Goal Model, including obstacles
• Static Structure (i.e., domain model)
• Behavioral Model (representative sequence diagrams and informative state diagrams)
• [Optional: Demonstration of Prototype]
Format of Presentation

• Not too dense: 5-7 key pieces of information
• Bullets are easier to read
  – Legible figures can be used effectively
• Bullets:
  – Should be highlights of what you will say
  – Audience will try to read everything
  – Do not read the bullets to audience
• Figures:
  – Walk audience through figure
  – Use animation to unfold complex figure
More tips

• Practice:
  – Be very familiar with slides (practice, practice, practice)
  – Flow, content, transition between slides
  – Get timing down so you don’t rush or end up short on content

• Content:
  – Terse
  – Figures
  – Bullets
  – Phrases
  – Highlights only
More Tips: Things to Avoid

• AVOID:
  – Verbose with a lot of words like this point, which could have been made with the single word “verbose”.
  – Compound Sentences
  – Unlabeled graphs
  – Big tables of numbers
  – Blocking parts of slide
  – Using font sizes too small – no smaller than 16 pt font
  – Pick dark colors that are readable from back of room
  – Overloading with animations (e.g., word by word, every slide, etc.)
