EDUCATION

- **Ph.D., Computer Science**, Michigan State University 9/2013 – present
 - Committee: Xiaoming Liu (chair), Anil K. Jain, Arun Ross, Daniel Morris
 - GPA: 3.75 / 4.0
 - **Bachelor, Electrical Engineering**, Wuhan University, China 9/2009 – 6/2013
 - GPA: 90 / 100
-

EXPERIENCE

- **Research Intern**, Media Analytics Department, NEC Labs America 5/2017 – 8/2017
 - **Research Intern**, National Laboratory of Pattern Recognition, Chinese Academy of Science 3/2013 – 5/2013
-

BACKGROUND & SKILLS

- *Research*: Computer Vision, Deep Learning, Face Recognition
 - *Programming*: C / C++, C#, Python, Lua, MATLAB, etc.
 - *Tools*: Torch, Caffe, OpenCV, L^AT_EX, etc.
-

FEATURED PROJECTS

- **FF-GAN: Large-Pose Face Frontalization**
FF-GAN is proposed as an end-to-end CNN framework to achieve face frontalization even for in-the-wild extreme-profile faces. Specifically, a deep 3D Morphable Model (3DMM) is incorporated in order to provide low frequency shape and texture regularizations beyond the training data. A generator takes the input image as well as the predicted 3DMM coefficients for image synthesis with multiple loss functions. A discriminator and a face recognition engine are employed to guide the synthesis of realistic and identity-preserved frontal faces.
- **DR-GAN: Disentangled Representation Learning GAN**
This work focuses on disentangled representation learning for pose-invariant face recognition by modeling the face rotation. DR-GAN improves conventional GAN in three ways. First, the generator is formulated as an encoder and a decoder with the representation bridging them. Second, a pose code is provided to the decoder to specify the target pose of the generated face, which results in the disentanglement of pose variation from the learnt identity representation. Third, the discriminator performs multi-task learning with identity and pose classifications to supervise face rotation. DR-GAN is potentially applicable to generic object recognition and rotation.
- **Simultaneous Pedestrian Detection and Segmentation**
This work designs a framework for pedestrian detection via simultaneous segmentation. It consists of a Region Proposal Network (RPN) and a Binary Classification Network (BCN). A segmentation branch is employed in each of the network with bounding box-based weak annotations as supervisions. It is observed that this segmentation branch helps to illuminate the pedestrian features in the CNN framework. State-of-the-art performance on Caltech Pedestrian Dataset is achieved.
- **Multi-Task Learning for Face Recognition**
This project explores how and why pose, illumination, and expression (PIE) estimations help face recognition in a multi-task CNN framework. It is shown that the side task supervisions help to disentangle the variations from the learnt identity features. A dynamic weighting scheme is employed to balance each side task during the training process. Further, a pose-directed multi-task CNN is proposed to learn pose-specific identity features for different pose groups, which further improves the performance of face recognition on both controlled and in-the-wild databases.

- **Plant Vision for Leaf Segmentation, Alignment, and Tracking**

This system performs joint multi-leaf segmentation, alignment, and tracking for fluorescence plant videos. This problem is resolved via two optimization processes with carefully designed loss functions. A multi-modality imagery database named MSU-PID is collected and released. It includes two different kinds of plant: bean and Arabidopsis, which are captured under four different sensors: fluorescence, infrared (IR), RGB, and depth. The proposed algorithm achieves competitive results in the Leaf Segmentation Challenging (LSC).

HONORS & AWARDS

- Graduate Assistantship and Tuition Scholarship of Michigan State University 2013 – 2017
- ICCV Doctoral Consortium 2017
- 2nd Prize at Engineering Research Symposium of Michigan State University 2016, 2017
- Research Fellowship of Michigan State University 2014, 2016
- Top 10% Paper Award at ICIP 2014 2014
- Best Student Paper Award at WACV 2014 2014
- 3rd Prize of North China Mathematical Contest in Modeling 2012
- 2nd Prize of Central China Mathematical Contest in Modeling 2011
- Outstanding Student of Wuhan University 2011 – 2013
- National Scholarship 2011 – 2013
